

# Weekly Report

---

*Period: 05/13/2013 – 05/19/2013*

## Research

After a detailed search on topic parameter study, I came up with a framework based on hyper-slice representation. Pingping and I had a detailed discussion on this as can be seen in the slides.

In addition, I read the paper “Tuner: Principled Parameter Finding for Image Segmentation Algorithms Using Visual Response Surface Exploration”.

## Projects

An initial design of multi-client supported visualization engine has been finished, which can be checked online “[支持多终端的可视化引擎设计](#)”. More discussion on the parallel system will be held with Biao Zhu.

## Work to be done in next week

- Detailed implementation of the proposed framework and think about the novelty of this framework
- Finish the review document of climate vis project
